Hon. Leo P. Carlin, Mayor, City Hall, Newark, New Jersey

Dear Sir:

The Annual Report of the Newark  $^{\rm F}$ ire Department for the year ending December 31, 1961 is respectfully submitted.

The various activities and operations are detailed in the  ${\mbox{\it Division}}$  reports appended hereto.

On June 1, 1961, Chief Engineer Fred Waidelick retired, and Deputy Chief Frank J. Hilliard was appointed Acting Chief Engineer of the Department.

There was a decrease in property loss, but an increase in the number of lives claimed by fire. The following is a statistical comparison with the previous year:

	1960	1961	Increase Decrease
Number of firecalarms Fire Loss Deaths	4,662 \$4,223,894.09 15	7,970 \$3,622,672.70 25	3,308 \$601,221.39

The per capita loss for 1961, based upon an estimated population of 405,220 is \$9.18, a decrease of \$1.24 under the ratio of 1960.

Continuing our policy of obtaining the most modern equipment available, the following items were purchased:

- 1. A recently developed and proven hose wagon equipped with a 750 G.P.M. pump and a 500 gallon water tank; the larger size pump and greater self-contained water capacity of this hose wagon provide greater versatility and potential in operation and use.
- 2. Power tools, including a saw powered by a self-contained gasoline engine. These tools are invaluable in general fire-fighting and rescue operations where a remote source of electricity precludes the use of electric power tools.
- 3. Five 500 G.P.M. fog nozzles of a highly improved design to be used with  $2\frac{1}{2}$ " hose.
- 4. Four cellar pipes wherein a fog spray is utilized in place of the solid stream in older type pipes. These new pipes are effective in both Class I and Class II fires (grease, heavy oils, paints, etc.), whereas the older type pipe could be used only on Class I fires.

5. Purchase of two 1,000 G.P.M. pumping engines; in addition, orders have been placed for two 1,000 G.P.M. pumping engines and one 85 foot aluminum aerial ladder truck. These will, of course, raise the standard of our first-line apparatus.

Fireman Robert Conklin was the recipient of the Medal of Honor donated by P. Ballantine and Sons, carrying with it a Five Hundred Dollar (\$500.00) cash award for the outstanding act of heroism by a fireman during the preceding year. The final selection was made by a Citizen's Committee. It was my privilege during the year to recognize and officially commend a number of Officers and Men of the Department for outstanding rescues and other meritorious acts.

In an increased effort to adopt a new Standard Operational Fire Fighting Procedure, the following innovations have been inaugurated:

- l. The response of the Deputy Chief in charge of the Training Academy to all multiple alarms of fire. It is his duty to observe operational procedures, make sketches of equipment layout, and prepare a critical analysis of the entire fire fighting operation. His observations and sketches are then incorporated into the training program to influence and improve future fire fighting procedures.
- 2. A complete inventory of all equipment carried on apparatus has been made, and a program of standardization is under way to permit a positive check of tools after a fire and to enable men on detail from other companies to locate equipment on strange apparatus readily.

Two high-level surveys were made to keep abreast of new developments within the City, one at Port Newark and the other on the use of radio-active materials.

The Port Newark Survey noted the phenomenal growth in values in this area and pinpointed probable hazards. This resulted in remedial measures approved by both the Fire Department Research Department and officials of the Port of New York Authority.

The survey concerning the use of radio-active materials by industry, hospitals and doctors in Newark resulted in the development of new fire fighting techniques. The types and quantities of all radio-active materials were noted together with the exact location in the building and the predicted hazard to fire fighters. Safe fire fighting procedures for individual locations were formulated and the information disseminated to all fire companies and other personnel concerned.

Another tangible by-product of the survey was the framing of ordinances by the Fire Department Planning Board governing the use, handling, distribution, etc., of radio-active materials within the City of Newark.

An intensive program of training and education was conducted throughout the year. Daily drills were held in company quarters, at the Training Academy and at the City docks and industrial plants along the Passaic Fiver and Newark Bay.

Companies reported to the Driver Training School grounds on Doremus Avenue to participate in an intensive driving refresher course.

In addition to the surveys and courses mentioned above, a course in Fundamentals of Fire Administration was offered to personnel of the Department in cooperation with Rutgers University. The State University also cooperated with us in offering courses for personnel in Supervision and Personnel Relations.

The Public Library arranged a course in conversational Spanish for members of the Department, due to the number of  $^{\rm S}$ panish-speaking people who now reside in the City.

The "In-Service Inspection Program" continued throughout the year with special emphasis on Company inspections of commercial, industrial and institutional buildings.

During Fire Prevention Week the Department engaged in an active program of inspections, demonstrations, lectures, fire drills and showing of films in various public, institutional and private establishments.

A set of working drawings was prepared by trained Fire Department personnel for the guidance of competing architects in the designing of the proposed new Central Headquarters firehouse.

A current crash program has greatly improved the efficiency and practicability of the Fire Department Civil Defense Plan. An entirely new Operational Plan has been put into effect, including a Plan for Post Attack and Recovery. A course in Civil Defense at the Training Academy has been instituted. The survey of radio-active materials has been incorporated into the Civil Defense Program.

In conjunction with the Civil Defense Program and because newly evolved fire fighting techniques require them, orders have been placed for the purchase of Geiger Counters, Dosemeters, Gamma Survey Meters, film badges, air samplers, Laboratory Scintillating Counter - Alpha-Beta-Gamma Ray, and dustproof suits.

All fire hose was tested and when found defective was removed from service and replaced with new hose.

All fires occurring during the year were satisfactorily controlled and extinguished.

The following recommendations are made in the interest of rendering more efficient fire service to the City:

#### RECOMMENDATIONS:

- 1. That a suitable training area be provided for adequate training of Department personnel. Initial steps are now under way toward the establishment of such facilities.
- 2. Plans should proceed for the erection of a fire station at William and Washington Streets for the re-location and centralization of Engine Companies Numbers 2 and 20, Rescue Squad No. 1 and Salvage Company No. 1.

This will enlarge the potential service areas of the companies. The location of four companies in a single house will permit a total of four buildings to be disposed of by the City and returned to the ratables. This recommendation is in line with the survey directed to the development of a plan to re-locate obsolete fire stations whereby maximum fire protection could be realized.

- 3. A Hook and Ladder Company should be quartered with Engine Co. No. 19 at Frelinghuysen Avenue and Fenwick Street. Two large housing projects in that area have created a need for this type of apparatus to be more readily accessible to the Waverly area.
- 4. A relocation of Engine Co. No. 26 and Truck Co. No. 12 in the Vailsburg area is desirable.
- 5. The program for replacing obsolete apparatus which was started in 1955 should be continued. It is essential that the condition of our second line apparatus be in proper operating condition. The extra apparatus is used as a temporary replacement for first line apparatus and called into service during major emergencies.

The Chief Engineer, all Officers and Men of the Department are to be commended for their efficient services and attention to duty during the year.

The Civil Defense Auxiliary Firemen and the Bell and Siren Club both rendered valuable assistance to the Department, for which I express our sincere appreciation.

On behalf of the Fire Department, I extend to you our sincere appreciation for your wholehearted cooperation throughout the year. We also express our thanks to the Hon. Mariano J. Rinaldi, Business Administrator, the City Council, the Directors and Members of all Departments for their splendid cooperation during the year.

James T. Owens, Director, Fire Department

#### ANNUAL REPORT For the year 1961

January 15, 1962

Hon. James T. Owens, Director Fire Department Newark, New Jersey

Sir:

In compliance with departmental regulations I herewith respectfully submit the 76th Annual Report of the Newark Fire Department for the year ending December 31, 1961.

The reports of all sub-divisions are contained herein.

The fire loss for 1961 was \$3,622,672.70, against a loss in 1960 of \$4,223,894.09.

Fire alarms in 1961 totaled 9,436; of these 1,466 were false alarms.

There were 25 deaths from fire as against 15 deaths in 1960.

Among the various activities of the Fire Department during the year 1961, I respectfully wish to call attention to the following:

In conformity with our continuous program of obtaining the most modern equipment available to meet the challenge of constantly changing situations in a growing city, the following equipment was purchased:

- 1. A recently developed and proven hose wagon equipped with a 750 G.P.M. pump and a 500 gallon water tank; the larger size pump and greater self-contained water capacity of this hose wagon provide greater versatility and potential in operation and use.
- 2. Power tools, including a saw powered by a self-contained gasoline engine. These tools are invaluable in general fire-fighting and rescue operations where a remote source of electricity precludes the use of electric power tools.
- 3. Five 500 G.P.M. fog nozzles of a highly improved design to be used with  $2\frac{1}{2}$ " hose.
- 4. Four cellar pipes wherein a fog spray is utilized in place of the solid stream in older type pipes. These new pipes are effective on both Class I and Class II fires (grease, heavy oils, paints, etc.), whereas the older type pipe could be used only on Class I fires.

In our training program we are now in the process of exploring fog appliances and developing their use to full potentiality.

Hon. James T. Owens, Director

... 2 m

January 15, 1962

5. Purchase of two 1,000 G.P.M. pumping engines; in addition, orders have been placed for two 1,000 G.P.M. pumping engines and one 85 foot aluminum aerial ladder truck. These will, of course, raise the standard of our first-line apparatus.

Surveys have revealed that during the summer months, in the daytime, a majority of alarms did not warrant the full complement of equipment scheduled for response. Consequently, from March 15th to November 27th during the daylight hours, a reduced assignment responded to all alarms of fire. This resulted in 2,346 fewer runs - 1,174 runs for engine companies and 1,172 runs for ladder companies - which in no way impaired the proficiency of the companies in controlling and extinguishing fires. This experiment provided a greater number of apparatus available in the event of emergencies, move-ups, multiple alarms, etc., and conserved the strength of the Department during these periods.

In an increased effort to adopt a new Standard Operational Fire Fighting Procedure, the following innovations have been inaugurated:

- 1. The response of the Deputy Chief in charge of the Training Academy to all multiple alarms of fire. It is his duty to observe operational procedures, make sketches of equipment layout, and prepare a critical analysis of the entire fire fighting operation. His observations and sketches are then incorporated into the training program to influence and improve future fire fighting procedures.
- 2. A complete inventory of all equipment carried on apparatus has been made, and a program of standardization is under way to permit a positive check of tools after a fire and to enable men on detail from other companies to locate equipment on strange apparatus readily.

Two high-level surveys were made to keep abreast of new developments within the City. One at Port Newark and the other on the use of radio-active materials.

The Port Newark Survey noted the phenomenal growth in values in this area and pinpointed probable hazards. This resulted in remedial measures approved by both the Fire Department Research Department and officials of the Port of New York Authority.

The survey concerning the use of radio-active materials by industry, hospitals and doctors in Newark resulted in the development of new fire fighting techniques. The types and quantities of all radio-active materials were noted together with the exact location in the building and the predicted hazard to fire fighters. Safe fire fighting procedures for individual locations were formulated and the information disseminated to all fire companies and other personnel concerned.

Another tangible by-product of the survey was the framing of ordinances by the Fire Department Planning Board governing the use, handling, distributions, etc., of radio-active materials within the City of Newark.

An intensive program of training and education was conducted throughout the year. Daily drills were held in company quarters, at the Training Academy and at the City docks and industrial plants along the Passaic River and Newark Bay.

-3-

January 15, 1962

Companies reported to the Driver Training School grounds on Doremus Avenue to participate in an intensive driving refresher course.

In addition to the surveys and courses mentioned above, a course in Fundamentals of Fire Administration was offered to personnel of the Department in cooperation with Rutgers University. The State University also cooperated with us in offering courses for personnel in Supervision and Personnel Relations.

The Public Library arranged a course in conversational Spanish for members of the Department, due to the number of Spanish-speaking people who now reside in the City.

The "In-Service" inspection program continued throughout the year with special emphasis on inspections of commercial, industrial and institutional buildings.

Fire Prevention Week was replete with fire drills, demonstrations, inspections, lectures and showing of pertinent motion picture films to various public, institutional and private establishments. Certain aspects of the program were continued throughout the year.

A set of working drawings was prepared by trained Fire Department personnel for the guidance of competing architects in the designing of the proposed new Central headquarters firehouse.

A current crash program has greatly improved the efficiency and practicability of the Fire Department Civil Defense Plan. An entirely new Operational Plan has been put into effect, including a Plan for Post Attack and Recovery. A course in Civil Defense at the Training Academy has been instituted. The survey of radioactive materials has been incorporated into the Civil Defense Program.

In conjunction with the Civil Defense Program and because newly envolved fire fighting techniques require them, orders have been placed for the purchase of Geiger Counters, Dosemeters, Gamma Survey Meters, film badges, air samplers, Laboratory Scintillating Counter - Alpha-Beta-Gamma Ray, and dustproof suits.

All fires occurring during the year were satisfactorily controlled and extinguished.

All fire hose was tested and where found defective was removed from service and replaced with new hose.

#### RECOMMENDATIONS:

- 1. That title for the site of our new training ground be acquired without delay so that the sorely needed training area can be put into operation in 1962.
  - 2. That consideration be given to the purchase of a new fireboat.
- 3. That a Hook and Ladder Company be placed in service in the quarters of Engine Co. No. 19 at Frelinghuysen Avenue and Fenwick Street.

Hon. James T. Owens, Director

\_ 4 \_

January 15, 1962

- 4. That the apparatus replacement program be continued. Unless our second line apparatus, used as spares and temporary replacements for first line apparatus are in top mechanical condition, the efficiency of the Department will be measurably lowered.
- 5. That construction of the proposed new central Fire Headquarters firehouse be undertaken immediately.
- 6. That better facilities and fire protection for the Vailsburg section of the City be provided. Upon completion of our new training tower, Engine Co. 21 and 26, and Truck Co. 12 could be relocated to the present Training Academy.

I wish to express my thanks to the Officers and Members of the Fire Department for their service and devotion to duty. A special word of thanks and appreciation to the Members of the Bell and Siren Club, Doctor Arthur D. Devlin, and our Civil Defense Auxiliary Firemen for their splendid cooperation and invaluable assistance during the year.

May I express to you, the Director of the Fire Department, my sincere thanks for your cooperation and assistance during the year. I also extend my thanks to the Honorable Leo P. Carlin, Mayor, the Honorable Mariano J. Rinaldi, Business Administrator, members of the Municipal Council, and to all other City Officials who in any way assisted this Department during the year 1961.

Respectfully submitted,

FRANK J. HILLIARD, Chief Engineer.

9. It is extremely immortant that an agency responsible for movement and control of emergency traffic, approach specific problems equipped with adequate data and best applicable techniques. Accordingly, this Division was represented at six four-hour meetings of the International Municipal Signal Association in this State, and their four-day conference in Cincinnati, Ohio; five two-hour sessions with National Board of Fire Underwriters Engineers, and one two-hour meeting with Enderal Communication Commission representatives - all with a view to resolving dispatching problems and discussing universally accepted procedures governing movement of fire equipment.

#### Fire Alarm and Radio Division (3)

The Fire Department, under Director James T. Cwens, has set for itself a goal of obtaining a high degree of municipal protection. One case in point is in the fire alarm field where the city-owned system is being constantly expanded, private industries and institutions are encouraged to install fire alarm boxes in their properties and connect to our facilities, and a high degree of cooperation is given three private companies who extend central station protection to 576 properties. As a result, Newark is now the ninth ranking city in fire alarm coverage.

This assures greater safety against conflagration, better job security for people employed in the city, lower rates of insurance, and extended protection to the public.

We are certain that when full fire alarm coverage has been achieved to complement our fire fighting force, together we will have created the greatest deterrence to fire and the devastation it causes.

PROCEDUPES. The year 1961 was the busiest ever experienced by this Department. The Fire Flarm and Radio Division processed an average of 26 alarms per day totaling 9,436 alarms, an increase of 1,003 over 1960, and 2,134 over 1959. Our peak fire traffic periods occurred between the hours of 3:00 p.m. and 10:00 p.m., which is standard in metropolitan areas.

Since this Division has no control over the er atic cycles when fire traffic at times reaches almost to the saturation point, it recognizes the need for new dispatching procedures that would adequately serve a purpose with no sacrifice of service.

New advances were incorporated into the system which not only made it more versatile and adaptable to future expansion, but permitted emergency traffic to be handled with dispatch.

Among these, the more prominent refinements were as follows: In-Serviceen route procedure; the Standardization of relocations; and the required report of a unit's arrival.

A continuing series of surveys revealed that even with the high rate of increase in alarms, the radio and signal system congestion was reduced by no less than 25% of what it had been in the past.

REPORTING APRIVAL. A unit's announcement that they have reached the assigned location enables the Dispatcher to act accordingly when a multiplicity of vicinity boxes and/or conflicting telephone reports for an emergency are received consecutively or concurrently.

UNIT RELOCATION. Suring major incidents heavy vehicular movements are absolutely necessary for equal protection of the entire city. This fact was impressively pointed out by Engineers of the National Board of Underwriters who maintain that the remaining residents of a section should not be denied fire protection while another incident is taking place therein.

With this in mind we collaborated in the development of a progressive type Dispatcher's relocation guide and chart which enables them to equally distribute remaining units throughout the municipality without confusion or delay.

#### Fire Plarm and Radio Division (4)

IN SERVICE, INROUTE. The adontion of the programmed return-to-service procedure has caused the number of previous radio messages to be increased substantially. However, the application of the stagger system enables the Dispatcher to receive and transmit return-to-service calls as fire traffic nermits and to expedite response to subsequent plarms by favoring home-bound over the housed unit.

FIRE BOX DISTRIBUTION. Cognizant of the fact that an increase in availability is one of the effective devices to use against the delayed alarm problem, this Division has added 202 fire alarm boxes to its network in the past five years, increasing the system by 21.8 to a total of 1,086 signalling stations in the field.

Despite the fact that this city has numerous hills, and many irregularly shaped block systems with adjacent communities abutting it haphazardly, we were able to plan a method of coverage compatible to this situation, and have, in the past few years, economically and practicably brought the system to within 85% of completion.

The trend today is toward super blocks and the elimination of streets in redevelopments; this will present no problem as we continue to move forward.

C i t'y - o w ned fire alarm boxes, private alarm systems, public telephones and roving radio-equipped city and commercial vehicles provide the public with as many as four direct or indirect means by which the Fire Department may be summoned.

MATRITEMANCE. Speedy and undisturbed flow of coded traffic necessitates a strict schedule of preventive and corrective maintenance of the signalling facilities.

Correspondingly we are carrying out a constant replacement and standardization program, this to prevent the occurrence of a fault and to facilitate finding it if it occurs.

To carry out our prepared plan of action, a member of this Division's official family has been designated as field maintenance at coordinator and expeditor.

TRAINING. A continuous training program is in effect; a retraining curriculum complete with written material and drill outlines is under development.

PUBLIC RELATIONS. Institutional and industrial representatives were shown the ease and speed with which a coded signal received direct from their protected premises could be handled, as compared with the telephoned alarm of fire requiring a more involved procedure.

Visitors from other states and from foreign countries were also received and treated to a complete demonstration of our Central Office operation.

PCVER SUFFLY. The installation of the ultra modern individual circuit power supply units is now complete. Since these units require that adequate level of electric power be constantly upheld, we maintain an auxiliary generator, completely equipped with automatic starting and change-over facilities. The unit is capable of supplying primary power for all transmitting and receiving equipment and emergency lighting, should our commercial source fail. This is another means by which the public is assured of continued fire alarm protection.

#### Fire Alarm and Radio Division (5)

<u>RECORDS</u>: The Division maintained a complete record of its activity throughout the year. The permanent equipment file was revised and expanded to include as much information as possible so as to enable maintenance personnel to carry out a programmed equipment service plan.

Records of the more complex tests were maintained and periodically analyzed in order to prevent difficulties.

A telephone directory embodying the names and numbers of fire officials, data on City, County and State agencies, and other officers who have authority to muster various facilities or perform functions, etc., was provided the Dispatchers.

We are now in the process of compiling a street file that will be second to none in the City. The file will be cross-indexed, and will contain the nearest box number and the first alarm response to every intersection in the municipality.

RECORDERS. On July 11, 1961, this Division began to automatically and permanently record both sides of every radio conversation with the use of tape recording machine. As recommended by the National Board of Fire Underwriters, similar units will shortly be connected to our telephone switchboard to record all communication between a caller and the Dispatcher.

Fourteen fire house type registers were purchased. Four will be used for installations in police precincts to supplement the existing tapper bell and thus prevent possible misreading of signals.

CONTROL CONSOLE. A command console designed by this Division, fabricated and installed by another city agency, was provided to enable centralized radio and telegraph control for greater operational flexibility.

The console, accommodating two Dispatchers, features dual radio units with associated microphones and foot control, street index, turn-out board, drop lock for positive time; telegraph key for routine signalling, automatic tape recorder, conelrad receiver and a button type telephone giving direct access to Fire and Police Department extensions, all Martland Medical Center and City Hall phones and a private line for outside business calls.

<u>UTILITIES</u>. Harmony is the essence of our relationship with the local utilities. A section of the ordinance granting them a franchise states in substance that they permit free use of their poles for connection of fire alarm equipment and wires thereto, and space in their subway to accommodate city fire alarm conductors.

For the protection of the public and their own interests, both utilities have cooperated with this Division to the greatest possible degree, with the result that we now have 154 miles of aerial line supported by their poles, and 354 miles of conductors housed in their ducts. This 508 mile network links all sections of the city with the central office; a radio system backup makes coverage complete.

A telephone switchboard of the latest manufacture was installed, extensions were re-numbered for uniformity of operation and additional business and fire lines provided, all with no loss of service by or to the department.

In another vein, the Telephone Company successfully traced several calls made by a false alarmist, and others where people reporting a fire left the scene before message was completed.

Page 21

#### Fire Alarm and Radio Division (6)

TURN OUT BOJES: After extensive research we designed a turn out board tailored to our particular need. Two such units were installed, one on the telephone switchboard and the other at the command console.

Interconnection of both units permits their control from two separate points and quickly establishes the status of each company at these operating points.

We have every reason to be more than satisfied with the performance of the units. They have already achieved a dramatic alleviation of what was rapidly becoming one of our worst problems, that of keeping a schedule of companies "on the air" on paper.

LCCATION\_RESPONSE INDEX: In preparation for the publication of a new running card index to replace the existing book, this Division laid the groundwork for and with the assistance of Department Chief Officers, made ready a complete set of 2529 diverse printer's forms. On each card were included the fire box location, company assignment and order of response.

RADIO: Utilization of two-way radio equipment has proved the value of communication as a time-saving tool in the coordination of our emergency operations.

A full year's use of this unique duplex repeater radio system enabled car-to-car communication to be carried on with ease between units in the city regardless of location, all quartered fire companies to monitor both sides of each conversation with stationary receivers, and the mobile transmission of confidential messages to the exclusion of all others.

Continued installation of high powered speakers at Engine pump controls, with an audio output that permits them to be heard at the noisiest fire scene, removed the danger that messages may be missed or misinterpreted.

CIVIL DEFENSE: We are constantly exploring methods by which our radio, telephone and telegraph networks can jointly or singularly be put to additional use; one such venture is in the field of Civil Defense. In case of an impending air attack the fire alarm and radio systems are geared for quick switch-over to Civil Defense emergency status. Particular emphasis is being given to evacuation routes, the fire stations located thereon and the possibility of decentralizing the fire alarm system and operation therefrom.

Fire alarm box distribution along these routes is being re-surveyed with a view to the completion of an arterial system, conductors on all secondary streets and isolated intersections being sectionalized and connected thereto.

The employment of our existing fire alarm conductors for simplex telephony between two or more points along the escape route is possible without impairment of the efficiency of the fire alarm system, this with the use of portable telephone and booster battery sets.

As an auxiliary to our radio system, a Civil Defense transmitter/receiver stands ready to be used for the mobilization and deployment of fire fighting forces, for reception of reports from surface radiological monitors, and the dissemination of information concerning radiation levels and chemical and biological data. The dispatchers are required by Federal law to monitor the Conelrad receiver for alerts and be prepared to reduce all radio traffic to a minimum when so directed.

#### EXTRA ACTIVITIES

Special and intensive inspections of all schools, public, private and parochial, were made for the purpose of eliminating all possible mazards, and submitting to the Superintendent of Schools a list of violations which were to be corrected.

Information was given by Fire Record Clerk to various insurance companies relative to fire investigations. This information was given at the diffice. Ten subpeonas served on Chief Inspector for records pertaining to various fires; 24 court appearances for various members also pertaining to various fires.

#### Bureau of Combustibles (4)

Distribution of regulations for oil drums and oil heaters, fire prevention posters for Fire Prevention Week was made, and special fire orills and lectures were given in schools, hospitals, factories, etc., Fire prevention and protection advice were given by the office staff during Christmas season, relative to making Christmas trees, decorations, costumes, etc., fire resistive.

Special notices regarding holiday decorations were distributed to taverns, restaurants, hotels, and night clubs; notices were distributed to storekeepers in relation to Christmas decorations and storage of stock.

Letters were sent to Puilding, Tealth, and Electrical Departments listing violations of their codes which our inspectors found during their inspections.

All taverns were inspected by the Pureau prior to issuance of licenses or granting renewals by the A.B.C.Board.

Assistant Chief Inspector Charles V.Stiennen and a detail of seven men patrolled stores to check on conditions and to prevent smoking in stores during Christmas rush.

Special inspections were made in cooperation with Mr. John Arthur of the Building Department of all stairways, refrigerator systems, air conditioners, etc., of all new buildings, remodeled buildings, hotels, and hospitals. Special tests made on new installations of standpipes, sprinklers and fire pumps. Special inspections were also made in cooperation with other departments in connection with licenses for dance halls, hotels, boarding houses, etc.

Representatives of this Bureau participated in conferences with the National Commission for Neighborhood Conservation and Rehabilitation and made recommendations toward better fire safety practices.

On July 4th, a special detail was assigned to the City Stadium for a fire works display, and special details were assigned throughout the City for various fire works displays, circuses and any special event where large groups of persons gathered.

Annual Report of Fire Loss Record Bureau for the year ending December 31, 1961

Fire losses for the year 1961 were as follows:

	BUILDINGS	CONTENTS

#### ARSON SQUAD

Annual Report submitted by Battalion Chief Vincent A. Brennan for the year ending December 31, 1961.

All fires investigated by the Arson Squad, also all complaints, suspicious fires, multiple alarm fires, deaths, arrests and dispositions of all arrests excluding the names of all adults and juveniles arrested or apprehended and released are submitted in a summary in this report. The names and records of all arrests and persons apprehended and released are on file in the office of the Arson Squad.

During the year 1961, this division worked in conjunction with the National Board of Fire Underwriters, the National Fire Protection Association, the Bureau of Combustibles, the Police Department, the Board of Education, the office of the Prosecutor of Essex County, the State Labor Department, and other agencies in the investigation of suspicious fires, arson suspects and special investigations.

Arrest records and photographs of all persons prosecuted for criminal offenses during the year 1961 are on file in the office of the Arson Squad. Copies of written statements of all suspects and witnesses involved in suspicious fires and other violations are on file in this office.

Special bulletins on all arrests, apprehensions, suspicious fires, and special investigations, also reports of all deaths caused by fire are submitted to the Director of the Fire Department and the Chief Engineer.

Three members of the Arson Squad attended the Arson seminar at Purdue University, and two members of the Arson Squad attended the Arson seminar at Ohio State University. Three members are taking a course in Photography at the Essex County Adult Technical School.

Other activities included educational talks on Arson Detection and Investigation to civic groups in the city and state.

Following is a summary of the total investigations and other activities of this division:

Fires investigated	•	548
Special investigations		44
Investigations - False Marms	1	,466
Total investigations	2	,058

The following figures are included in the above totals.

Arrests	94
Deaths	26
Two-alarm fires	22
Three-alarm fires	10
Four-alarm fires	2

Arrests for Arson 5 Setting fires 10 False alarms 11 Disorderly persons - 2 Illegal oil stove - 12 Loitering under liquor -1 Arson Murder 2	Convictions for Arson - 4 pending, 1 conviction Setting fires - 9 convictions, 2 dismissed False Alarms - 11 convictions Disorderly Persons - 2 convictions Illegal Oil Stoves - 12 convictions Arson Murder - 2 pending.

#### SPECIAL SERVICE AND SUPPLY COMPANY

Annual Report submitted by Battalion Chief Peter B. Kelly for the year ending December 31, 1962.

This company serves the Department 24 hours a day, seven days a week. There are always four men on night duty to respond with Special Service emergency trucks to assist in any emergency.

The following vehicles are assigned to and operated by this unit.

- 1 Dodge 4-door sedan for Battalion Chief Peter B. Kelly.
- 1 Dodge 4-door sedan for Captain H. Brunner Apparatus Inspector.
- 1 Dodge 4-door sedan for department messenger.
- 1 Dodge 3/4 ton open bod delivery truck.
- 1 G.M.C. 1-ton emergency truck.
- 1 G.M.C. 1-ton utility truck.
- 1 Ford 1/2-ton truck open body used for recharging fire extinguishers.
- 3 Ford 1/2-ton pick-up trucks.
- 1 Ford 1-1/2 ton truck used as smoke ejector.

This company responded to 56 alarms of fire with smoke ejector, floodlights, generators, portable pumps, foam powder, foam liquid, wet water, etc.

Public relations - participated in 15 demonstrations showing the proper handling of CO2, foam, soda and acid, and dry powder extinguishers at hospitals, schools, and institutions; also participated in Fire Prevention 'eek activities.

Pumping out cellars - A total of 21 cellars were pumped out consuming 126 hours of actual pumping time.

Cut and pulled weeds and brush around all hydrants in the Port Newark and other outlying areas. Inspected 260 hydrants and reported 57 to the Water Department.

Made all necessary change of apparatus. This required moving 167 pieces of apparatus to and from the various corpanies and Empire Street repair shop, paint shop, body shop, spring shop and the F & P Brake Company. Moved all apparatus and other vehicles to and from R.C.A. Corp. at 19 Prospect Street for radio repairs or new installations.

Supplied gasoline and motor oil to pumpers and other apparatus at the scene of multiple alarms and other fires or emergencies. A total of 10,641 gallons were delivered, of which 1950 gallons were delivered to the Fire Boat, and 2090 gallons went to the scene of fires.

During the year, a total of 327 CO2 extinguishers were picked up at Special Service and recharged. A replacement is made at the time of pick up with a charged extinguisher. All tanks that have not been hydrostatically tested within a five-year period receive the I.C.C. test before being recharged.

Canvas shop - Repaired all old salvage covers and replaced those not fit for fire use; made covers for the tops of apparatus covering hose compartments, spine boards, foam boxes, stanchions for aerial ladder control levers, mask boxes, hailers, stretchers, pay-roll pouches and tool bags. Also lettered 50 new salvage covers.

#### Special Service and Supply Co.(2)

A total of 226 soda and acid, and  $\sim 5$  foam fire extinguishers were refilled at hospitals, institutions, and city buildings.

Members of this Company participated in numerous company drills operating the smoke ejector, both from nouse current and generator; drilled in the use of portable pumps, generators and floodlights; maintained apparatus and equipment used by Special Service in good operating condition, equipped properly and recey to respond to any emergency.

Members of this company made all transfers and replacements of 196 ladders for a total of 4,935 feet that were damaged or broken at fires; also made arrangements for all ladders that needed refinishing or repairs to be brought into carpenter shop.

Supplies - All supplies, tools, enuipment, varsol, disinfectant, waste, rags, soap, etc., are requisitioned, apportioned and delivered by Special Service and Supply Company. This necessitates approximately 60 deliveries a month by truck. Supplies and other equipment requested by special requisition are delivered as soon as possible and necessitates about 700 truck deliveries a month.

This unit repaired 298 Port lights and supplied 330 Burgess batteries, delivered 514 Burrell All-Service gas mask canisters; also delivered 212 oxygen and 16 Scott Air cylinders.

A total of 86 - 100 lb. bags of rock salt were delivered to the various companies for use on icy sidewalks.

During the year we delivered ll new metal lockers to the various fire houses, and picked up 6 air compressors from companies for repairs and later delivered them back to the company quarters.

Many other services necessary to the efficient operation of the Fire Department were performed by Special Dervice & Supply Company during the year.

The Annual Hore Test was conjucted during April and May. Hose found unfit for service was either replaced or repaired.  $2\frac{1}{2}$ " hose issues prior to and including the year 1949 was taken out of service and placed in reserve (197 - 50 ft. lengths). Hew Hose was issued to replace old hose taken out of service. Ten lengths of old  $2\frac{1}{2}$ " hose was sold during the year. Teports were submitted to Fire Beadquarters with the names and addresses of buyers to be billed for same. 196 pieces of equipment were repaired and returned to service, including  $2\frac{1}{2}$ " and  $1\frac{1}{2}$ " playpipes, booster nozzles, gate valves, Siamese connections, for nozzles, etc.

#### Special Service Co., 56 Prosnect Street

Annual Report of the Apparatus Division for the year ending Jecember 31, 1961

In compliance with orders, I herewith submit the following report. All apparatus in the Newark Fire lepa trent were inspected at regular intervals during the year. Fumping engines, aerial trucks, chiefs' cars and other equipment were checked and when necessary were repaired at the Bureau of Motors.

All new Fire apparatus, chiefs' cars and other new Fire Lepartment vehicles were checked thoroughly to see that they complied with department specifications. All members of commanies were instructed in the operation and care of all new apparatus and equipment.

During the year arrangements were made with the New Jersey State Motor Vehicle Inspection Station for all Fire Department cars to be inspected and receive the necessary stickers.

This Division assisted in making arrangements to have all Fire Department apparatus, chiefs' cars and other vehicles of the Fire Department change radio units from New Jersey Bell Telephone Comrany to m.C.a. Fadio units.

Tires on apparatus were inspected at regular intervals throughout the year. Apparatus and other motorized equipment in the Fire Department were greased periodically. Motor oil was changed when required, transmissions and rear ends were checked, oiled, greased and inspected. All Motorized equipment requiring winterizing was prepared for the winter season.

Assisted Vr. Albert Jacubson, a representative of the Itlas Life Net and Life Belt Company of New York City, in making an inspection of all life belts and life nets in service in the Fire Department. All defects were noted and replacements were made where necessary.

The following makes and types of apparatus and other vehicles are in service in the Newark Fire Department.

#### TRAINING ACADEMY

Annual Report submitted by Deputy Crief Henry L. Schoettly for the year ending December 31, 1961

During the year 1961 the Academy staff conducted 299 sessions of instruction to various groups. The greatest amount of time was devoted to recruit training and to company re-training (see Appendix I). Many other groups also received instruction or were given lectures or demonstrations. These groups consisted of the personnel of hospitals and civic, religious and fraternal organizations as well as private fire brigade groups. A total of approximately 38 subjects was covered.

During Fire Prevention Week speakers were sent to 107 assembly periods in public and parochial schools to talk on Fire Prevention. Also, during that week, a public demonstration was given in Military Park and at Federal Square. At both locations the public was invited to, and did, take part in the demonstrations. A Fire Prevention display was set up in Bamberger's Department Store where pamphlets on Fire Prevention were distributed to the public.

Academy personnel instructed groups at the New Jersey State Fire College, the New Jersey State Fire Officers College and the fire colleges of Monmouth, Morris and Sussex Counties. In addition, lectures were given to the New York and New Jersey Firemen's Association at Fairleigh Dickinson University, and to the New Jersey Boys Club at Rutgers University.

All tours of all Newark fire companies were re-trained in the use of the E & J Resuscitator, and were instructed in the application of the new mouth-to-mouth method of artificial respiration.

The Academy undertook research and made reports on radiological monitoring devices required by the Fire Department; combustible gas indicators and their proper use; the plastic called "Teflon".

Chief Schoettly of the Academy attended a course given by Rutgers University through the city's Personnel Department, in Personnel Lanagement and Supervision. He also took part in all the accident review sessions held during the year, and served on the committee to study and make recommendations on the standardization of tools and equipment carried by ladder companies in the Department. He interviewed applicants for Educational 'id, and processed their applications.

The Academy worked on proposed legislation concerning the storage, handling and use of radioactive materials in the City of Newark, and on a course in radioactivity to be given to all personnel of the Department. The latter entailed the making of 32 drawings and then photographing them to make a set of visual aid projection slides.

The Photographic Section of the Academy covered 98 assignments and processed and enlarged 1,000 photographs.

During the year some 10 to 15 individuals and groups from in and out of town visited the Academy and were conducted through by Academy personnel who explained the tools and equipment, etc.

Appendix I is a quantitative break-down of the work carried on by the Academy in 1961.

#### MEDICAL DIVISION

Annual Report submitted by Dr. John N. Pannullo, Department Surgeon for the year ending December 31, 1961.

In compliance with the Rules and Regulations of the Department and the requirements of my duties, I have rendered prompt attention to all reports of illness or injury coming under my jurisdiction, and have granted sick leaves to members when necessary.

Regular additional visits were made to sick or disabled members to keep properly informed of the progress of their cases.

Monthly reports were submitted, together with special reports when required, for the information of the  $^{\rm D}$ irector and the Chief Engineer.

During the year, I inspected the various fire houses to see that they were maintained in sanitary condition. I attended all fires of magnitude where professional services might be required.

Six Members of the Department died during the year:

Date	Name	Title
Jan.20 Apr.11 Sept.8 Sept.23 Oct.20 Dec.15	A. Leo George Joseph G. Buhl Eugene J. Diou Raymond Magnusson Daniel J. Kelly Frank W. Siebenhuhner	Fireman Fireman Captain Captain Fireman Fireman

Monthly reports were submitted listing the names of members of the Department who were disabled, and containing other statistics, a resume of which follows:

### Annual Report of the Activities of the Catholic Chaplain for 1961

During the year of 1961, I answered all alarms at which my presence was required. Visited hospitalized firemen when informed of their illness. Attended funeral Mass and burial of Catholic firemen who died during the year 1961.

Whenever possible, attended social functions of the Newark  $^F$ ire Department.

Conducted the Annual Communion Breakfast of the Holy Name Society of the Newark Fire Department. Mass was offered in Saint Thomas Aquinas Church on Sunday, May 21. The breakfast was served in Saint Thomas

A large delegation of Holy Name men attended the Holy Hour in Sacred Heart Cathedral.

Attended all monthly meetings of the Newark Fire Department Holy Name Society at Saint Thomas Aquinas Auditorium.

Acted as Chaplain of the Fire Department Anchor Club.

Rev. Philip McCabe.

### Annual Report of the Activities of the Protestant Chaplain for 1961

In compliance with Department Rules, I herewith submit this report:

- 1. I made many visits to various fire houses during the year.
- 2. Made many sick calls on Members of the Fire Department in the various hospitals of the City.
- 3. Conducted several funerals of Members of the Department, both active and retired.
- 4. Responded to multiple alarms whenever possible, and to many single alarms.
  - 5. Attended numerous Department gatherings and meetings.
- $oldsymbol{6}$ . Conducted the Annual Memorial Services and  $oldsymbol{D}$ inner of the Protestant Members of the Department.

I am deeply grateful to Director James T. Owens, Chief Frank Hilliard, Members of the Department, and the Chaplains, for their many kindnesses.

Rev. Clarance Bleakney.

Annual Report
of the
Jewish Chaplain
for the year 1961

This is to advise that through the year 1961, as Chaplain of the Department, I have answered fire calls whenever summoned, participated in public functions, attended the sick and dying, and in general lent myself in full capacity as clergyman over all those to whom I minister, in whatever contingency my services were called.

I wish to express my deep appreciation of the many courtesies extended me in performing the duties of my office.

Rabbi Horace L. Zemel.
